

Lab 6.3.12.1 Functions: part 1 - function call

Objectives

Familiarize the student with:

- Functions
- Function call
- Printing on screen

Scenario

Check the code below. Add some code to call the functions defined in the code. Call the functions as many times as necessary and in the proper order so as to get the expected output. Your version of the program must print the same result as the expected output.

```
#include <stdio.h>

void hello()
{
    puts("Hello!");
}

void another()
{
    puts("It's me - another function.");
}

int main(void)
{
    /* your code */
    return 0;
}
```

Example output

```
Hello!
Hello!
Hello!
It's me - another function.
Hello!
It's me - another function.
```
